ASX ANNOUNCEMENT

Wednesday 4th November 2015

Further A\$1m worth of New International Contracts awarded to Phoslock Licensees

Key Points

- Second material Brazilian contract awarded
- German contract win by Phoslock partner
- New contracts worth A\$1,000,000 already awarded this quarter

The Board of Phoslock Water Solutions Limited (ASX: PHK or the Company)

wishes to advise that two of its international licensees have been successful in winning major new contracts.

PHK's international licensees have just been awarded two projects, one in Northern Brazil and a large lake project in Southern Germany. These projects are expected to commence shortly and to be completed by the end of this financial year.

Our Brazilian licensee, has been awarded a contract to restore a eutrophic drinking water reservoir in Northern Brazil. The water body has received high inputs of phosphates for many years from urban settlements and agricultural land in the surrounding catchment. The project should commence before the end of the year, will continue for 6 months and involves the importation of 'Phoslock' valued at almost A\$400,000.

The success of PHK in Northern Brazil follows the Company's most recent announcement that a Consortium in which Phoslock's Brazilian licensee is a major partner has been awarded an A\$10 million project to complete the environmental remediation of a large inner city lake in a major metropolitan city in Brazil.

Our licensee in Germany, Bentophos GmbH, has been awarded a A\$500,000 project to restore a large recreational lake in Southern Germany. This project is confirmed and the application will take place in January - February of 2016.

Chairman Laurence Freedman AM stated, *“The past few months have seen a substantial increase in both small and larger lake contracts. The pipeline continues to grow which gives us a solid expectation of increased sales in the future.”*

ABOUT PHOSLOCK WATER SOLUTIONS LIMITED (PHK)

PHK produces *Phoslock*, a patented technology which was developed by the Commonwealth Scientific and Industrial Research Organisation (“CSIRO”). PHK has lodged a subsequent patent application to protect the core Phoslock technology which is in an advanced stage of being granted in approximately 50 countries, with the intention of extending the core *Phoslock* technology to the year 2033.

PHK is headquartered in Sydney, Australia and has offices in Brisbane, Sichuan, China and European Operations (covering Europe, Central & South America) near Bremen, northern Germany. PHK is represented by licensees and agents in ten other countries including SePRO Corporation in the United States.

Phoslock is a certified NSF/ANSI Standard 60 product - North American Drinking Water (see websites ansi.org and scc.ca).

Phoslock Water Solutions is listed on the Australian Stock Exchange (ASX Code: PHK).

For more information about Phoslock Water Solutions and *Phoslock* please visit our websites: www.phoslock.com.au or www.phoslock.eu (Spanish, Italian, Dutch and German) or www.phoslock.com.br (Portuguese) or www.phoslock.com.cn (Chinese)

ABOUT PHOSLOCK – the Product

Phoslock is a unique water treatment product that binds phosphorus from a water body and provides a protective permeable layer to sediments preventing the re-release of the phosphorus. Retention of phosphorus reduces the level of algae by depriving it of nutrients. This in turn improves water quality, both for human use and aquatic life as well as preventing and controlling Harmful Algal Blooms (HAB).

Phoslock is primarily used as an in-water solution for lakes, drinking water reservoirs and other high value recreational water bodies. It is also used as a preventative product to absorb phosphorus before it is transported into water bodies by being applied in storm water basins and inflow channels, rivers and canals.

Phoslock is approved for use in North American Drinking Water Reservoirs via NSF/ANSI Standard 60 Certification. **This certifies that *Phoslock* is safe for use in drinking water.**

Phoslock has been used on a number of high profile water bodies in Europe/UK, North America and Australia.

Over 30 peer reviewed technical papers, authored by leading academics, have been published in leading scientific journals on *Phoslock*. For access: www.phoslock.com.au
